

[Important]

- ✓ Each watering/feeding should be enough to drip through the bottom to clean the roots about 1 gallon. Position baskets on the edge of overhangs with a 12"-18" hook or chain so the sky hits the top of the foliage. Continued watering with plain water and heavy rain will leach out key nutrients from the basket. Feeding replaces those nutrients. The months of June, July, and August will require the most feeding due to the long, warm days.
- ✓ **Check the Basket Weight/Color of the leaves** - heavy is watered, yellow is starving

Petunia Combinations and Calibrachoa Mixes

- *Light:* Sky exposure is critical and may take direct sun up to 9 hours.
- *Moisture:* Early AM waterings on hot windy days of May-August.
- *Fertilizer:* May 25-Sept 15. Miracid is Best. Mix 1.5 tbsp / 2gal 1x per week. Roots can be damaged feeding in cool weather. Keep evenly moist.

Light Sun or Shady Areas: Shade Impatiens, Fuchsia, Non-Stop Begonias

- *Light:* North, East, or West side with partial sun during hot days above 85
- *Moisture:* Allowing the soil to dry between waterings, forces flowering.
- *Fertilizer:* Miracid or Miracle-Gro, mix 2 tsp / gal 1x per week or as foliage yellows. These varieties love stress free areas with some sun protection

Extreme Sun: Vacation Combinations, Geraniums, Mandevilla Combos, Vinca

- *Light:* Semi Sun to Full Sun at higher temperatures. South, East or West location.
- *Moisture:* Prefers soil to dry between waterings. Wilting seldom causes injury
- *Fertilizer:* Miracid, Scoop is Provided mix 1.5 tbsp / 2 gal 1x a week. Succulents are flexible sun loving plants. Carefree, 1-2 weeks alone.

New Guinea Impatiens

- *Light:* Partial Sun, Partial Shade or just sky exposure is best. North, East or West side
- *Moisture:* Evenly moist, water in the mornings. Warm, windy days... water well!
- *Fertilizer:* Lower Doses, Miracle-Gro or Miracid 2tsp/gal 1x per week. More if yellowing. New Guinea Impatiens love water!! **WILTING MAY CAUSE DAMAGE**

Porch Potatoes and Textured Foliage

- *Light:* Flexible, Low Light (under structures) to 6 hours of direct sun.
- *Moisture:* Evenly moist waterings, less in low light, more in sunny spots.
- *Fertilizer:* Miracid or Miracle-Gro. Mix 1.5TBLS /2gal 1x a week
- *Specifics:* Low light requires less water and feed while sunny spots need more
